Linux Commands Assignments - II

Assignment: "cat" Command in Linux
Objective: To learn and practice the "cat" command in Linux.
Instructions:

1. Open the terminal in your Linux system.
Already open
2. Navigate to a directory containing a file you would like to view.
Already open

3. Use the "cat" command to view the contents of the file. The syntax for the "cat" command is as follows: cat [options] filename
4. Try out the following examples and write down the commands you used to view each file:
a. View the contents of a file named "my_file.txt".
b. View the contents of a file named "my_other_file.txt" and number the lines.
c. View the contents of a file named "my_third_file.txt" .
5. Create a new file and use the "cat" command to add content to it.
6. Try out some of the additional options for the "cat" command (e.g., -n, -b, -s).
